

WhatsApp Software Business Roadmap

Simple, Detailed Guide to Build & Sell Your Own WhatsApp CRM Software

WHAT ARE WE BUILDING?

You are building **ONE software portal (CRM)**. Multiple business owners (Jewelry shops, Real Estate companies, Hospitals, etc.) can buy subscriptions from you, log into their own separate dashboards, connect their WhatsApp numbers, send bulk broadcasts, set up automated auto-replies, and chat with customers.

How It Works In Easy Words:

- 1. Your Main Software Engine:** You build 1 website portal.
- 2. Separate Client Logins:** Client A (Jewelry) and Client B (Real Estate) log into separate accounts.
- 3. Quick 2-Minute WhatsApp Connection:** Each client clicks "Connect WhatsApp" and logs into their Meta account. Their phone number links to their login only.
- 4. Complete Privacy:** Client A can NEVER see Client B's messages or contacts.

Step-by-Step Development Plan

STEP 1: Legal & Meta Company Setup

Time: Week 1 – 2

Get Meta's Official Approval First

- **Get Business Papers Ready:** Make sure your business has official proof (GST Certificate, Shop Act, or Company Registration). The business name, address, and website domain must match exactly.
- **Create Facebook Meta Business Account:** Go to `business.facebook.com` and create your company portfolio.
- **Create Developer App:** Go to `developers.facebook.com`, create a "Business" app, and select the **WhatsApp** product.
- **Verify Your Business:** Upload your GST / Business document under Security Settings. Meta will check and approve your company within 1 to 5 days.

STEP 2: Building the Main Backend & Webhook

Time: Week 2 – 4

Build the Engine That Receives Messages

- **Create Database with Client Partition (Tenant ID):** Set up your database so every message, contact, and chat has a tag called `tenant_id`. This ensures Client A's data never mixes with Client B's.
- **Build Webhook URL:** Create a web link on your server (e.g., `https://yourdomain.com/webhook`) that Meta talks to. When anyone sends a WhatsApp message to any of your clients, Meta pushes the message to this Webhook.
- **Message Router:** Your server checks the incoming phone number ID, looks up which client owns that number, and routes the message directly to that client's inbox dashboard.

STEP 3: Building the Client Features

Time: Week 4 – 7

Build the 3 Main Modules Your Clients Will Pay For

- **1. Multi-Agent Shared Live Inbox:**
 - A simple chat interface (like WhatsApp Web).
 - Supports sending images, PDFs, voice notes, and quick reply buttons.
 - Multiple staff members/agents can log in and divide customer chats among themselves.
- **2. Bulk Broadcast & Campaign Tool:**
 - Allows business owners to upload Excel/CSV contact lists.
 - Select approved WhatsApp message templates (Promotions, Offers, Order Alerts).
 - Send thousands of broadcast messages safely in batches without getting banned.
- **3. Auto-Reply & Chatbot Engine:**
 - **Keyword Reply:** If a customer types "PRICE" or "LOCATION", automatically send the answer.
 - **Menu Buttons:** Interactive button menus (e.g., 1. See Products, 2. Book Appointment, 3. Speak to Agent).
 - **AI Chatbot:** Connect AI (like Gemini) so it reads business details and answers customer questions like a real human support agent.

STEP 4: Add Easy 2-Minute Client Login ("Embedded Signup")

Time: Week 7 – 8

Make Onboarding Automatic for Clients

- In your software, add a big button: **"Connect My WhatsApp Business Number"**.
- When your client clicks it, Meta's Official Pop-Up opens.
- The client logs into their own Facebook/Meta account and enters their mobile number OTP.
- Your software automatically gets access to send messages on their behalf. They don't have to send you any complex API keys manually!

STEP 5: Record Video & Get Final Meta Review

Time: Week 8 – 10

Get Live Mode Permission to Sell Publicly

- **Record Screen Video:** Show Meta how your software works in a short video:
 1. Client logging into your software.
 2. Connecting their WhatsApp account via the popup.
 3. Receiving a customer message in the inbox.
 4. Sending an auto-reply and broadcast.
- **Submit for App Review:** Request "Advanced Access" permissions in your Developer Dashboard.
- **Go Live:** Switch your Developer App from "Development Mode" to "Live Mode" and start selling!

4. How Billing & Payments Work

How You Make Money:

1. **Software Monthly Subscription:** You charge your clients a monthly fee (e.g., ₹1,499 to ₹4,999/month per business) to use your software, inbox, and AI bot.
2. **Meta Charges (Official Deliverability Fee):** Meta charges for messages sent directly to each client's credit card or Meta account. You don't have to pay for your clients' bulk marketing campaigns out of your own pocket!
